

Training Plan

Rory Bradshaw

Intro to workout plan

Hi Nick,

Welcome to Phase 3 of your workout programme!

In the last Phase you have been working at a higher intensity than when you began your training programme with me. To continue to develop your strength and flexibility to new levels, we will now be adding some additional volume to your strength exercises whilst continuing to develop your flexibility. As before, I have tested and found good results applying this Phase across a six week training period.

This Phase applies two approaches to your training. The first you are familiar with and I would like you to continue applying the 'rest-pause' method - a reminder of this is below. The second approach will involve the application of back-off sets.

Back off sets:

These are a great way of adding additional volume to the same or similar movement pattern, at a lower intensity, as your body fatigues. You will continue to perform your main strength work with a high intensity and lower rep range (3-8 reps), including the rest-pause method. But after you complete your final set of a high intensity strength movement, you will do 1-2 back off sets of the same movement but at a lower intensity. By lower intensity I mean you are working at about 30-50% of the intensity of the main strength exercise.

Why are we doing this? To add some endurance work to your strength training, burn fat, build muscle mass, and therefore enhance your body composition. It's also been shown back off sets can aid recovery as they significantly increase blood flow to the area you are training and improve joint health. In short, there are A LOT of potential benefits for only a small amount of additional work.

Examples:

- Chin ups - I might prescribe you 3 sets of chin-ups for 6 reps. After you complete the 6th rep of the third set, you will do a back off set of bodyweight rows for 15-20 reps. The bodyweight rows are a lower intensity pulling movement, the chin ups are the higher intensity pulling movement.
- Squats - I might prescribe you 3 sets of weighted back squats for 8 reps. After you complete the 8th rep of the third set, you will do a back off set of 20 back squats at a lower weight (around 30-50% of your working weight you used for the main 3 strength sets).

Nick Zervakis

Personal Workout Plan

A reminder of **Rest-Pause training**:

This is where you will **take a short rest between the last reps of each set**, so that you get a bit of recovery and can maintain a higher intensity for longer. For example you might be aiming to hit 6 reps of an exercise, but you have chosen a weight that would make it impossible to hit 6 reps on that weight.

Therefore, during your set, you take a rest after 4 reps, of 15-20 seconds and then perform the 5th rep, take another rest of 15-20 seconds, then perform the 6th rep. This will allow you to accumulate more reps at a higher intensity, leading to more gains.

Instead of stopping that set after 4 reps you just got on extra two! Your body will respond well to this stimulus and get stronger. This may not be applicable for all the exercises I have prescribed you - for holds and stretches it is less relevant - but when doing repetitions of a movement that are challenging it will come in use for you.

Let's talk:

I've designed Phase 3 based on where you are at the end of your Phase 2 training. As usual, there will be a feeling out process to begin with where we can discuss how easily you will be able to implement it considering your time/space/access to equipment and I can make changes to suite you, as well as if the variations I have assigned to you are suitable for your where you're currently at in your training. Let me know if we need to make some adjustments.

You may notice some exercises reappear, others are new.

Please also note that if you feel like you were progressing with some exercises from Phases 1 and 2 and want to stick with them or include one of those sessions on your training this month feel free. Whilst I am prescribing you this new phase, you know best what is feeling good for your body!

Weekly check-ins:

Your check-in day and time will still be each **THURSDAY by midday**.

To submit your checkin, press the '+' icon on your app home screen and press +add check in.

Please also use this as an opportunity to send me and photos or videos of your training for me to provide feedback on.

Nick Zervakis

Personal Workout Plan

Meal Plan:

Make sure to favourite any meals you like so they stay in your app. I have given you some new suggestions for this phase but the same rules and approach apply that I outline in the Phase 1 document.

When to do your workouts:

As usual, I suggest you plan out your week ahead of time and input when you plan to do each workout and aim to complete full cycle of the workouts in this Phase within a 7-12 day period.

Remember:

Phase 3 is a chance to take another step up in your training and and as your coach, I'm here to support you through this process, so please let me know if you have any questions.

LET'S GO 💪

Program overview

Strength + Mobility: Lower Body Focus 1

EXERCISE

Assault Bike (Fan bike)

1 sets 100 kcal

"Complete as fast as you can, starting slow, increasing intensity throughout the set as you get warm. Try to beat your time from the previous session each week to hit 100cals. "

Rest 60 sec before continuing

Duck Walk

2 sets 30 sec

rest 30 sec

"Cues:

From squat position take small steps forward, allow knee to come over toes and maintain upright torso.

This exercise can be challenging so dont worry if you are unable to do it just yet.

If done correctly it can be great for stretching the toes and opening up the hips. "

Rest 30 sec before continuing

Internal Hip Rotation Progressions (seated -> squat)

2 sets 10-20 reps

rest 30 sec

"Variation 1 - Seated version:

Cues:

Sit on floor with hands behind your hips and use this to sit your torso as upright as possible.

Legs are bent, feet on the floor. Feet can be placed slightly wider than hips.

Allow knee to come inwards down to the floor to internally rotate the leg in the hip joint. Try to limit how much your torso rotates in the direction of the stretch and get knee as close to the floor as possible. This is your femur bone rotating internally towards the floor.

Perform the rotation for 10-20 reps each side and then include a hold at the end of the set for around 30 seconds.

Nick Zervakis

Personal Workout Plan

You should feel the stretch in your adductors and/or hips and will likely feel some sensations in the knee. Avoid pain but tightness is fine.

Variation 2 - Hips raised version:

The same as variation 1, but you lift your hips into the air to make the exercise more intense.

Variation 3 - Perform the internal rotation from a squat position.

Variation 4 - Perform the squat variation but allow both your hips to lower to the floor and find an external rotation with the opposition hip. Use your hands or fingertips to support you.

Variation 5 - Same as variation 4 but perform without the support of your hands or fingertips on the floor.
"

Rest 30 sec before continuing

Hip Hinges

2 sets 6-8 reps

rest 30 sec

"Hip Hinges:

The main goal is to use your posterior chain (glutes and hamstrings) to power the movement.

Try the variations and see which one feels good at this stage. Options include:

- feet shoulder width apart or wide*
- knees bent or straight*
- bodyweight/weight added*
- no pause/ isometric pause at bottom of each rep*

Cues:

- 1. Stand Tall with Neutral Spine.*
- 2. Engage your core muscles to stabilize your spine. Ensure your back is in a neutral position, neither rounded nor overly arched.*
- 3. Initiate the Movement from the Hips so as you start the hip hinge, push your hips back and lead forward with your chest.*
- 4. Maintain a Soft Bend in the Knees unless you are very flexible and can keep the legs straight whilst hinging forward without rounding in the lower back.*
- 5. Try to maintain a straight line from the crown of your head to your hips. "*

Nick Zervakis

Personal Workout Plan

Rest 30 sec before continuing

Superset

3
rounds

"Perform these two movements together as a superset IF you are able to with your access to equipment and space, if you cannot, you can do them separately"

Front Squats

6-8 reps rest 90 sec

"Front Squats are a great lower body and posterior chain strengthening exercise that also require an open thoracic spine and some shoulder mobility to maintain the upright posture throughout the movement."

When you first begin, you may wish to place a small weight plate under each heel to allow you to sit deeper in the squat position.

You want to rest the barbell across the front of your shoulders. This may feel uncomfortable on your neck, but you will be okay!

Setup:

Begin by standing with your feet shoulder-width apart. Grip the barbell with palms facing up slightly wider than shoulder-width apart. You can use your fingers here. If this position does not work you could also try crossing your arms and resting each hand on top of the opposite shoulder.

Lift your elbows up as high as you can get them to create the shelf for the barbell to sit across.

Maintain a neutral spine by keeping your chest up and your back straight. Try to avoid rounding your back as you squat down.

Fix your gaze straight ahead or slightly upward to maintain a neutral neck position.

Execution:

Take a breath in at the top of the rep and hold the air in your lungs to brace your core. Keep this pressure as you descend down then slowly breath it out as you squat back up.

Brace your core muscles throughout the movement.

Nick Zervakis

Personal Workout Plan

As you squat, bend your knees and hips at the same time to sit deep, trying to keep your weight on your heels and midfoot, not on your toes.

Lower yourself until your thighs are parallel to the ground or as far as your mobility allows. Ideally, aim for your hip crease to go below your knees.

Keep pushing your knees out throughout the rep and allow them to pass over your toes.

The hard part is trying to maintain your elbows lifted up throughout the rep and not fold forwards.

Focus on driving up through your heels as you squat back up.

Take your time to build up the weight, you got this!

"

Nordic Curls

6-8 reps

rest 90 sec

"Instructions in video"

Rest 60 sec before continuing

Back off set - apply 30-50% intensity

**1
round**

"Do 1 high rep set of the same two movements as above but with a much lighter weight for squats and a thicker resistance band for the Nordic Curls as a drop set. "

Front Squats

15-20 reps

rest 60 sec

"Front Squats are a great lower body and posterior chain strengthening exercise that also require an open thoracic spine and some shoulder mobility to maintain the upright posture throughout the movement.

When you first begin, you may wish to place a small weight plate under each heel to allow you to sit deeper in the squat position.

You want to rest the barbell across the front of your shoulders. This may feel uncomfortable on your neck, but you will be okay!

Nick Zervakis

”

Nordic Curls

15-20 reps rest 60 sec

Nick Zervakis

Personal Workout Plan

"Instructions in video"

Superset

3
rounds

"Perform exercises A and B back to back with a short break between each. "

Pigeon stretch (passive -> active -> weighted)

90 sec

rest 30 sec

"This is predominantly an external hip rotation position that stretches and strengthens the hips and glutes. It can also be great for alleviating lower back pain. It can be REALLY unpleasant to start with, but trust me it gets easier with time!"

The video provides variations, from passive to weighted active. We will get comfortable in one before progressing.

General cues that apply to all:

Hip Alignment - try to get your hips squared to the front of the mat or the way you are facing. The hip of the extended leg should be facing down towards the floor to allow for a deep hip stretch.

Spine Alignment: Keep your spine straight and elongated. Avoid rounding your back or collapsing in the upper body. If folding forward, lead with your chest.

Weight Distribution: Try to distribute your weight evenly between your hips. Avoid putting too much pressure on one side, as it may lead to an imbalanced stretch.

Modification: Depending on your flexibility, you can adjust the position of your front foot and back leg to find the most comfortable and effective stretch for your hips. Ideally you want to work towards the front leg's shin being at a 45 degree angle and when you look to your back foot, see that it is in line with the hip of the same leg and hasn't drifted out to the side too much.

For a deeper stretch, you can walk your hands forward, bringing your chest closer to the mat.

Breathing and Relaxation: Take deep, slow breaths as you hold the pigeon stretch. With each exhale, try to relax and sink deeper into the stretch, allowing your body to release tension. If doing reps, try to time each rep with your inhale/exhale. "

Jefferson Curl - Rotated Variation

6-8 reps

rest 30 sec

"Exercises cues in video "

Nick Zervakis

Personal Workout Plan

Rest 60 sec before continuing

Superset

2
rounds

"Perform these exercises back to back to prepare for the front splits"

Quad + hip flexor stretches

120 sec

rest 30 sec

"Choose the progression that feels comfortable for you and hold the stretch for up to 120 seconds per set. "

Leg lift hamstring stretch (weighted and non-weighted)

120 sec

rest 30 sec

"Setup:

Have a sturdy box/bench/shelf in front of you. Stand facing the elevated surface with your feet hip-width apart. Hold a dumbbell or kettlebell in one hand.

Place the foot of the leg you want to stretch onto the elevated surface.

Toes of the stretching leg can be pointed up to the ceiling or pointed forwards.

Initiate the Movement:

Inhale and begin the exercise by hinging at your hips, sending them back and leaning forward.

Keep a slight bend in the knee of the foot on the box and a soft bend in the knee of the standing leg. Straighten out the knees if it feels okay and engage quad muscles.

Stretching the Hamstring:

As you lean forward, focus on feeling the stretch in the hamstring of the leg on the box.

Reach your free hand towards the floor or allow the weight to hang down to increase the stretch.

Maintain Control:

Avoid rounding your back or excessively arching your lower back during the stretch. Try to keep a neutral spine and lead with lower belly as you hinge forward rather than chest. As you fold forward, think of pulling your thigh bone towards the hip joint.

Breathing:

Nick Zervakis

Personal Workout Plan

Your breath is really helpful for this stretch. Inhale as you initiate the movement by hinging at your hips. Exhale as you deepen the stretch by leaning forward."

Rest 60 sec before continuing

Superset

3
rounds

"Perform back to back with a 90 second break between each set"

Front Split Hold (bodyweight)

60-90 sec

rest 90 sec

"Front Split Eccentric:

Gradually lower down into your deepest front split. The video shows me doing it without use of an external support but you can place yourself near a wall and lightly touch it with your hand or fingertips to help you balance. You could also use a pole or fitness frame to hold onto, if the position is too demanding and you are still building the strength to work up to doing it freestanding. If you are holding onto a pole or equipment, try to use as little support as possible so you really build strength in this position. By getting stronger in the splits position you will be able to access it more easily and not have to spend a long time passively stretching deep into it, this is because you have got STRONG in the position not just flexible.

Other option for support: yoga blocks either side of your hips you can place your hands onto.

It is likely you will have the strength to hold yourself in the position without support for some time, then reduce the intensity by finishing the set by using an external support. This is absolutely fine, but try to stay unsupported for as long as possible.

Cues:

- Hips should remain square as possible*
- Torso upright, but if you wish to fold forwards over your front leg towards the end of the set to work more into developing hamstring flexibility then you are welcome to do this.*
- Try to keep your quads and glute muscles engaged throughout.*
- Try to not hyperextend your knee of the front leg, keep a slight bend if you are dumping into it"*

Middle splits (bodyweight)

60-90 sec

rest 90 sec

"First I want to let you know - splits are hard! Like really hard and will require lots of grit and deep breathing as well as consistent practice to improve, but you got this! The nervous system will be concerned you are wanting to make this crazy shape, but with consistent training, you will be showing it

Nick Zervakis

Personal Workout Plan

you have the mobility to get into this position and over time you will get increasingly relaxed in the deep splits position.

Setup:

Find a surface that is not too grippy - you want to build strength so having too much friction between the soles of your feet and the floor will not make it challenging enough. Though opting for socks on a wooden or studio floor may not be enough resistance.

Initiating the movement:

Stand up with your feet pointing out in opposite directions at about a 45 degree angle.

Gradually allow your feet to slide apart, whilst maintaining an upright torso and anterior pelvic tilt. This is very important to allow space for you thigh bones to move in the hip joint and create the space for you to go deeper into the position. Anterior tilt is where your hips tilt backwards and your lower back arches a little, your bum 'sticks out'.

As you lower down deeper into the middle splits position, try to keep your glutes and quad muscles engaged - though this will be hard. Don't just let gravity do the work though. Try to actively push your feet wider.

Try to find a position you can hold for at least 30 seconds, if you can't hold the position for this long you have gone too deep into it. Don't force yourself into the splits quickly. Work gradually, inching your feet wider over time to avoid injury.

Once you have held the position for 30 seconds, you can start to allow your feet to slide wider apart as your hips move back and torso remains upright. Avoid folding forwards too much. You can start to move the feet wider each time you exhale and hold the position for a total of 30-120 seconds.

Option 1: Use of external support.

If you are still a beginner with the splits, I recommend using a workout bench or small table in front of you as you descend into the position. Place your hands lightly on this surface and use as little support as possible to allow yourself to maintain the splits position. Using this external support makes the splits position slightly less demanding for your body and requires slightly less strength so can be a great way of getting more comfortable in this position.

Nick Zervakis

Personal Workout Plan

Option 2: No use of external support.

Once you have built some strength in the middle splits position, you can start to do it without support of an external object, though you may wish to use one towards the end of your sets to allow you to go a bit deeper. You may not have the active flexibility to hold your splits really deep, but you may have the passive flexibility at a deeper range, so I like to do a hold without support and then when I fatigue, use an external object to go deeper into the position to finish off the set.

"

Elongated Exhales

1 sets 10-30 breaths

"Elongated exhales are an amazing way to activate your parasympathetic nervous system aka your 'rest and digest' state.

They're a simple but very effective tool you can use when you are feeling stressed/anxious to reset yourself, but are also great to do at the end of a workout to start the recovery process immediately by taking your body and nervous system down from its high energy state from the workout.

Cues:

Sit or lay down (If sitting find a tall spine or sit against a wall if it helps).

Close your eyes or take your gaze to a fixed spot e.g. the wall in front of you.

Focus on the sensations of breathing (eg air coming into your nose, descending down into your lungs and back out again).

For up to 10-30 rounds of breath, exhale for twice the length of your inhale.

For example you could:

- Inhale for a count of 2, exhale for a count of 4*
- Inhale for a count of 3, exhale for a count of 6*

The number is less important, it's more important that the exhale is more prolonged than the inhale. This signals to your nervous system it is okay to relax :) "

Hybrid Session

EXERCISE

Warmup superset

1 round

"Perform bodyweight variations of each of these three exercises to loosen up before your run session. "

Hip Hinges

10 reps

"Hip Hinges:

The main goal is to use your posterior chain (glutes and hamstrings) to power the movement.

Try the variations and see which one feels good at this stage. Options include:

- feet shoulder width apart or wide*
- knees bent or straight*
- bodyweight/weight added*
- no pause/ isometric pause at bottom of each rep*

Cues:

- 1. Stand Tall with Neutral Spine.*
- 2. Engage your core muscles to stabilize your spine. Ensure your back is in a neutral position, neither rounded nor overly arched.*
- 3. Initiate the Movement from the Hips so as you start the hip hinge, push your hips back and lead forward with your chest.*
- 4. Maintain a Soft Bend in the Knees unless you are very flexible and can keep the legs straight whilst hinging forward without rounding in the lower back.*
- 5. Try to maintain a straight line from the crown of your head to your hips. "*

Duck Walk

reps

"Cues:

From squat position take small steps forward, allow knee to come over toes and maintain upright torso.

This exercise can be challenging so don't worry if you are unable to do it just yet.

If done correctly it can be great for stretching the toes and opening up the hips. "

Cossack Squats

reps

"Split Squat Cues:

Nick Zervakis

Personal Workout Plan

1. Adopt a wide stance with toes pointing outward at an angle of about 45 degrees. This stance will allow you to move smoothly into the lateral squat position.
2. Shift your bodyweight to one leg as you begin to bend that knee and lower your body to the side. Keep the other leg straight with the heel firmly planted on the ground. The straight leg will remain active during the movement so if you can, keep the quad and hamstring muscles engaged.
3. Avoid lifting the heel of the foot of the leg you are squatting on, as this may cause balance issues and reduce the effectiveness of the exercise. Go to the deepest range of the movement that you can whilst keeping the heel grounded. You could place a small step/weight under your heel to elevate it if this helps you go deeper into the movement without it lifting.
4. Try to keep an upright torso with your chest lifted during the entire movement.
5. Like always, move with control and gradually increase your range of motion as your mobility improves.

Balancing - you can use an external surface to help keep your torso upright or extend you arms in from of you to help you balance as you perform the movement. "

Running

1 sets 800 m

"warmup run, working up to a faster pace throughout the 800m"

Superset

3 rounds

"A Hybrid Training Superset to build cardio and endurance and burn fat. Increase the number of reps of each of the 3 exercises (KB Swings, Burpee + JK Crunch) by 1 rep per set each session. 2.5 minute rest between each superset. "

Kettlebell Swing

15 reps rest 30 sec

Running

400 m rest 30 sec

Burpee

15 reps rest 30 sec

Running

400 m rest 30 sec

Jack Knife Crunch

20 reps rest 30 sec

Running

400 m rest 150 sec

Rest 90 sec before continuing

Cool Down Superset

1 round

"Hold these stretches after your run session to avoid getting too tight from the run :) "

Calf Stretch (passive -> active -> weighted)

120 sec

Nick Zervakis

Personal Workout Plan

"Perform the passive calves stretch for 1-2 sets (depending on time), then perform the single/double leg active stretch after for 1-2 sets (again depending on how much time you have).

Passive calves stretch: Hold for 2 minutes on each side per set.

Single or double leg active stretch: Choose one which feels better for you. Perform 5-10 hinges per set and hold a small weight whilst you do the hinges if it feels good. Once you have done the hinges, add in a hold of 10-30 seconds at the end of the set, going deeper into the stretch every exhale.

Of course if doing single legs, repeat on both sides for the same duration with the same weight.

All information within the instructional video. "

Laying Figure 4 stretch

120 sec

"Leg Positioning:

Cross one ankle over the opposite knee, forming a "figure 4" shape with your legs.

Flex the foot of the leg that is elevated to protect your knee joint.

Grip:

Draw your legs towards you by either gripping the back of your thigh or your shin with fingers interlocked. At the same time keep pressing your tailbone into the floor and don't allow lower back to lift too high off the floor.

This should create a stretch in the hip and glute of the crossed leg.

You can also gently push the knee of the crossed leg towards the floor to increase the stretch.

Repeat on both sides.

Hold stretch for 30-120 seconds.

"

Quad + hip flexor stretches

120 sec

"Choose the progression that feels comfortable for you and hold the stretch for up to 120 seconds per

Nick Zervakis

Personal Workout Plan

set. "

Strength: Upper Body (Gym)

EXERCISE

Assault Bike (Fan bike)

2 sets 10 kcal

Wrist mobility (9 movements)

2 sets 2 min

rest 60 sec

"The instructional video is an overview of a wrist mobility and stretch sequence containing 9 variations.

Depending on your wrist strength and mobility different variations will feel more/less challenging.

I recommend choosing 2-5 of these movements and performing them in one go, spending 20-60 seconds performing each of the chosen wrist exercises, depending on how they feel.

For those with a dynamic movement (e.g. wrist rocks with fists clenched or palm lifts), move GENTLY though the movement. To make them harder, lean you shoulders more forwards to add the intensity of demand onto your wrists.

To finish or within the set, shake out your hands and avoid creating any pain in your wrists.

Remember, this is a WARM-UP, not a workout. Do enough to warm up and stretch your wrist, but not enough to hurt or fatigue them. You don't want them tired before you train.

You just want strength, mobility, and warmth."

Rest 30 sec before continuing

Spinal rotation movements (dynamic + passive)

1 sets 10 reps

"Choose a variation that feels good and remember to perform on both sides.

Combine repetitions with a hold in the twist position of 15-30 seconds at the end of the set if it feels comfortable.

Twist further on your exhales. "

Rest 30 sec before continuing

Scapula movements

1 sets 40 reps

Nick Zervakis

Personal Workout Plan

"Hold a small weight in each hand to progress these movements and build shoulder strength (1-4kg)

Perform these movements for up to 10 reps per movement (so up to 40 total):

Retraction

Protraction

Elevation

Depression

"

Rest 30 sec before continuing

Hanging shrugs

2 sets 5-10 reps

"Starting Position:

Hang from a pull-up bar or rings with an overhand grip (palms facing away from you).

Allow your body to fully extend, and your feet should not touch the ground. HOWEVER If this exercise is too challenging to perform with feet off the floor, you should place a small step or box under you and place your toes or feet onto it JUST enough to support you in the position as you do the shrugs. Try to use as little support from the feet as possible so you build your strength in your shoulders.

Engage Core and Maintain Body Alignment:

Tilt your pelvis forwards (anterior tilt) to engage core and build shoulder mobility.

Maintain a straight body alignment from head to heels. Avoid excessive swinging or arching of your back.

Initiate the Movement:

Begin the exercise by actively pulling your shoulder blades down and back.

Imagine you are trying to squeeze a pen between your shoulder blades.

Shrug Movement:

Reverse the movement by elevating your shoulder blades towards your ears, contracting your upper back muscles.

Keep your arms straight throughout the movement.

Nick Zervakis

Personal Workout Plan

Avoid fully relaxing your shoulders at the bottom to maintain tension on the muscles.

Focus on the muscles in your upper back to lift and lower your shoulder blades."

Rest 30 sec before continuing

Superset

3
rounds

"Perform as a superset if your space and equipment allows"

Mixed grip chin up

6-8 reps rest 90 sec

"Starting Position: Set up the rings at an appropriate height, so you can hang from them with your arms fully extended. Stand under the rings and reach up to grab one ring with an overhand grip (palms facing away from you) and the other ring with an underhand grip (palms facing towards you). Note this exercise can also be performed using a straight chin up bar but rings are preferable as they are kinder on the elbow joint.

Hang and Engage: Hang from the rings with your arms straight, shoulder-width apart, and your body in a hollow position (body slightly curved). Engage your core muscles to stabilize your body.

Scapular Retraction: Before pulling yourself up, initiate the movement by engaging your scapula - Depress and retract your shoulder blades, pulling them down.

Pull-Up: Pull your body upward by engaging your back and bicep muscles. Focus on pulling your elbows down and back towards your ribcage. Aim to bring your chest towards the rings. DRIVE your elbow back behind you as you come up.

Supporting arm: Use as little support as you need in the supporting arm to complete each rep. Only support just enough to be able to complete the reps.

Maintain Ring Position: Keep the rings close to your body throughout the movement, avoiding any outward rotation.

Chin Above Rings: Pull yourself up until your chin is above the level of the rings. Keep your neck neutral and avoid straining your neck by straining it up.

Nick Zervakis

Personal Workout Plan

Controlled Descent: Lower yourself back down in a controlled manner, fully extending your arms at the bottom. Maintain tension in your muscles during the descent.

Breathing: Exhale as you pull yourself up, and inhale as you lower yourself down.

Avoid Swinging: Keep your body still and avoid swinging during the exercise. Focus on using your muscles to control the movement."

Incline Barbell Bench Press

8-10 reps

rest 90 sec

"Setup and cues:

- Setup by squeezing shoulder blades together and down your back to stabilise shoulders.*
- GRIP the bar HARD almost like you are trying to bend it.*
- Lower the bar to touch your chest with control*
- Explode up, pushing your feet into the ground to help you explode and be stable throughout the movement. "*

Rest 60 sec before continuing

Superset

1
round

"Push/Pull Back off set - max out in one final high rep set using 30-50% of the intensity of the main superset previously. "

Pull up + chin up progressions

MAX

rest 60 sec

"Depending on your level of strength, you will choose a different variation (band assisted, unassisted bar pull ups, ring pulls ups). The video shows pull up and chin up variations - both are valid and we will work on both during your programme but choose one to stick with for a full phase (1 month).

Variation 1: Band assisted

Setup:

Secure a resistance band around the pull-up bar. Depending on your strength, different levels of resistance band will be required to complete the reps, so you may need to buy a variety to use as you progress.

Step onto the resistance band with one or both feet, depending on what you find more comfortable - just make sure to change the foot between left and right if doing one foot in order to avoid imbalances.

Nick Zervakis

Personal Workout Plan

Place hands slightly wider than shoulder-width apart for both pull up and chin up versions.

Hang from the bar with your arms fully extended.

Engage Core and Set Shoulder Position:

Engage your core muscles by tilting your pelvis forward, and angling your feet in front of your legs so that your legs angle diagonally in front of you extending away from your hips.

Set your shoulder blades by pulling them down and back. This creates a solid foundation for your shoulders and helps maintain proper alignment.

Initiate the Movement:

Inhale and start the pull-up by pulling your shoulder blades down and DRIVE your elbows behind you as you come up as if you were elbowing someone behind you.

Focus on using your upper back muscles and arms to initiate and complete the pull-up.

Full Range of Motion:

Try to pull your chest as close to the bar as possible.

Keep your body in a straight line throughout the movement.

Controlled Descent:

Slowly lower your body back down to the starting position.

Maintain control throughout the descent to engage your muscles effectively.

Pace:

Pull up as explosively as you can and take 2-3 seconds to descend down in the rep.

Breathing:

Exhale as you pull your body upwards. Inhale as you lower your body back down.

Variation 2: Unassisted (cues as above without the band)

Nick Zervakis

Personal Workout Plan

Variation 3: Add a weight either between your feet or more preferable is using a weight belt.

Variation 4: Rings chin ups. Cues as above with some extra considerations:

Setup:

Hang the gymnastic rings at a height that allows you to reach them comfortably while standing on the ground.

Initiate the Movement:

Inhale and start the chin-up by pulling your elbows down and back, focusing on engaging your biceps and upper back muscles. Turn the rings as you come up and keep elbows tucked in.

Aim to pull your chin over the height of the rings at the top of the movement.

Keep your wrists neutral and maintain tension in your core.

Keep your body aligned and avoid swinging."

Incline Barbell Bench Press

MAX

rest 60 sec

"Setup and cues:

- Setup by squeezing shoulder blades together and down your back to stabilise shoulders.*
- GRIP the bar HARD almost like you are trying to bend it.*
- Lower the bar to touch your chest with control*
- Explode up, pushing your feet into the ground to help you explode and be stable throughout the movement. "*

Rest 90 sec before continuing

Superset

**3
rounds**

Pike Push Ups - Rings

6-8 reps

"Audio instructions in video. "

Bicycle core exercise (floor based)

8-12 reps

"3 variations to choose from of increasing intensity and difficulty:

- 1. Heels come back to the floor each rep*
- 2. Feet stay lifted off the floor*
- 3. Feet stay lifted and legs remain straight not bent like in variations 1 and 2*

Nick Zervakis

Personal Workout Plan

Cues:

- Perform each crunch on an exhale if possible
- Try to keep shoulders off the ground throughout and adopt a hollow body position. This is where you draw your belly button and core down towards your spine whilst tucking your pelvis forwards. You can tell if you are doing this correct as the small space between your mid-back and the floor when you are lying down will close as you adopt a slightly rounded position. "

Superset

1
round

"Push/Pull Back off set - max out in one final high rep set using 30-50% of the intensity of the main superset previously. "

Bodyweight Row -> Arc Rows

MAX

rest 90 sec

"Setup:

Adjust the rings/TRX so that they are hanging at about waist height.

Grab the rings in a pronated grip (palms facing the ground) and take a step back to create tension in the straps while keeping your body at a slight angle.

Adjust the intensity - you can decide the angle you wish to use. The more angled away your torso is from the rings, the harder the exercise and the closer (ie the more upright you are) the easier. So try out a few angles and choose the one which you can maintain to do the reps prescribed.

Engage Core and Set Shoulder Position:

Engage your core muscles set your shoulder blades by pulling them down and back (depress and retract). This creates a stable base for your shoulders.

Initiate the Movement:

Start with your arms fully extended, hands holding the rings/TRX handles, and your body leaning back at a slight angle.

Initiate the movement by pulling your chest up towards the handles, leading with your elbows. DRIVE your elbows back HARD.

Rowing Motion:

Nick Zervakis

Personal Workout Plan

As you pull your chest towards the handles, focus on squeezing your shoulder blades together.

Imagine you are trying to pull your chest to the handles while keeping your body in a straight line.

Full Contraction:

Continue pulling as high as you can.

Controlled Return:

In a controlled manner, gradually extend your arms to return to the starting position, allowing your shoulder blades to separate.

Keep tension in the straps throughout the movement, avoiding slack.

Breathing:

Exhale as you pull your chest towards the rings. Inhale as you slowly extend your arms to return to the starting position.

ARC PULLS PROGRESSION:

1: Grab the rings and set your feet into position. The more parallel you get to the ground, the harder this movement becomes.

2: Squeeze the shoulders BACK and push the rings DOWN with straight arms. Then, drive your elbows BACK to go up.

3: Do NOT voluntarily lower down. Instead, PUSH the rings DOWN further towards your feet and as you do, the leverage will get worse and eventually, you will start to fall. When that happens, resist as MUCH as you can and that will let you get a maximal eccentric.

As you get stronger, get more parallel to the ground and touch the ring lower and lower on your torso!"

Pike push up variations

MAX

rest 90 sec

"Variation 1 - feet on floor pike push up:

Starting Position:

Begin in a plank position with your hands placed slightly wider than shoulder-width apart and your feet

Nick Zervakis

Personal Workout Plan

together.

Walk your feet towards your hands, lifting your hips up into a pike position. Your body should form an inverted V shape, with your hips lifted high and your arms and legs straight.

Hand and Arm Placement:

Position your hands firmly on the ground, spreading your fingers for better stability. GRIP the floor. Point your fingers forward, or slightly turned inward if it feels more comfortable.

Core:

Engage your core muscles by drawing your belly button in towards your spine. This will help maintain a stable body position throughout the exercise.

Shoulders:

Elevate your shoulder blades by pushing the floor away and try to externally rotate them too by hugging the elbows towards each other.

Initiate the Movement:

Inhale and begin to lower your head towards the ground by bending your elbows.

Descent:

Keep your elbows pointing slightly back and don't allow them to flare out to the side as you lower your head towards the ground.

Lower your head until it is just above the ground or until you feel a stretch in your shoulders and chest.

Head placement: Aim to bring your head forwards and down so that when it touches or nears the floor, it forms a roughly equal triangle of points with both hands. Your head should not be coming in the middle of your hands in line with them.

Push Back Up:

Exhale and press through your palms to extend your arms, pushing your head and upper body back to the starting pike position. Make sure to push HARD and as you do try to keep your hips high and maintain the V shape position.

Nick Zervakis

Personal Workout Plan

Variation 2 - feet on box pike push up:

Same cues as above but elevating the feet and being as light as you can on your toes makes it harder.

Remember to bring the head FORWARD from the hands not between them.

Variation 3 - feet on box pike push up with hands on parallel bars/dumbbells:

Elevating the hands allows your range of motion to be increased so you gain more mobility in the movement. "

Rest 60 sec before continuing

Superset

2
rounds

Behind neck press (barbell)

15 reps

rest 90 sec

"Setup: can be performed seated or standing. Stand with your feet shoulder-width apart, and grip the barbell with a pronated (overhand) grip, wider than shoulder-width apart.

Position the barbell behind your neck at the level of your upper traps, resting it on your shoulders.

Engage the Core:

Engage your core muscles by drawing your belly button in towards your spine. This will help stabilize your torso throughout the movement.

Initiate the Movement:

Inhale and begin the exercise by pressing the barbell upward using your shoulder and triceps strength.

Pressing Up:

Push the barbell upward in a vertical line, directly over the middle of your head.

Maintain control throughout the descent to engage your muscles effectively.

Avoid Hyperextension:

Avoid hyperextending your back or leaning too far backward during the press. Keep your spine in a neutral position to protect your lower back and SQUEEZE YOUR GLUTES throughout. "

Bent over row (barbell)

15 reps

rest 90 sec

"Setup:

Nick Zervakis

Personal Workout Plan

Stand with your feet shoulder-width apart or slightly narrower.

Hold a barbell with an overhand grip (palms facing down) and hands slightly wider than shoulder-width apart.

Bend your knees slightly and hinge forward at your hips, keeping your back flat and chest up. Your torso should be at approximately a 45-degree angle to the ground.

Engage Core and Set Shoulder Position:

Engage your core muscles by drawing your belly button in towards your spine. This helps stabilize your spine and prevents excessive arching.

Set your shoulder blades by retracting and depressing them aka pulling them down and back. This helps to stabilize your shoulders and create a solid foundation for the rowing motion.

Rowing Movement:

Inhale and initiate the exercise by pulling the barbell towards your lower ribs. Drive elbows behind you. Keep your elbows close to your body as you row, avoiding excessive flaring out to the sides.

SQUEEZE your shoulder blades together at the top of the row to fully engage your upper back muscles.

Controlled Lowering:

Exhale as you slowly lower the barbell back down to the starting position, fully extending your arms.

Maintain control throughout the descent to engage your muscles effectively.

Avoid Jerking or Swinging:

Avoid using momentum to lift the barbell, as this reduces the effectiveness of the exercise and increases the risk of injury.

Perform the movement in a controlled manner to maximize muscle engagement.

Tip: GRIP the bar HARD"

Rest 60 sec before continuing

Nick Zervakis

Personal Workout Plan

Neck stretch sequence

1 sets 2 min

"Hold each stretch for 30-60 seconds.

Be gentle with all these stretches to avoid straining your neck. "

Rest 30 sec before continuing

Eagle Hang (passive -> active)

2 sets 30 sec

"The first progression is partial load hangs. Leave your feet just barely on the ground or a box and hold for time.

Progression two is where you can place your feet on the ground again but perform inlocates where you'll roll your shoulders forward and press your hips up behind you with your weight partially on the ground or a box again.

Progression three is to progress to hanging without the feet. Take your time building up to this. A little goes a long way.

Progression four will have you doing the above but with NO foot assistance again."

Rest 30 sec before continuing

Hang (passive -> active)

1 sets 30 sec

"Passive hanging from a bar is a beneficial exercise for stretching and decompressing the shoulder joint and spine, improving grip strength, and promoting overall shoulder health.

Active hanging builds strength in the shoulders and upper back as well as improves overhead mobility in the shoulder flexion movement.

Variation 1: Supported passive hang. Find a bar or rings of a height that allows you to have both feet on the floor. With hands shoulder width apart, grip the bar and lower yourself into a hang position with the feet supporting you as little as possible. Be light on the toes so you build strength in the shoulders.

Variation 2: Make the above harder by picking up one foot so your shoulders have to work harder

Variation 3: Hang passively with both feet lifted

Nick Zervakis

Personal Workout Plan

Variation 4: Make the hang active by bringing your knees in front of you and engage your core by adopting posterior pelvic tilt (hips and tailbone thrust forward and rounding in lower back)

Variation 5: Make this active hang harder by locking out the legs "

Elongated Exhales

1 sets 10-30 breaths

"Elongated exhales are an amazing way to activate your parasympathetic nervous system aka your 'rest and digest' state.

They're a simple but very effective tool you can use when you are feeling stressed/anxious to reset yourself, but are also great to do at the end of a workout to start the recovery process immediately by taking your body and nervous system down from its high energy state from the workout.

Cues:

Sit or lay down (If sitting find a tall spine or sit against a wall if it helps).

Close your eyes or take your gaze to a fixed spot e.g. the wall in front of you.

Focus on the sensations of breathing (eg air coming into your nose, descending down into your lungs and back out again).

For up to 10-30 rounds of breath, exhale for twice the length of your inhale.

For example you could:

- Inhale for a count of 2, exhale for a count of 4*
- Inhale for a count of 3, exhale for a count of 6*

The number is less important, it's more important that the exhale is more prolonged than the inhale. This signals to your nervous system it is okay to relax :) "

Sprint Session

EXERCISE

Leg swings

1 sets 10 reps

"Hold onto a solid surface with one arm.

Swing legs in three directions for up to 10 reps on each leg per direction.

For the forward and side swing movements, you could throw in a hold on the final rep of 10-30 seconds, trying to lift the leg as high as you can in front of you or to the side, to build up strength in this position. If doing a hold, remember to breath and lift the foot as high as possible.

Try to keep the legs almost straight but with a slight bend.

Don't kick so hard you hurt your hamstrings or groin, start gentle and get more energetic with the movement each swing. "

Rest 60 sec before continuing

Hip Hinges

1 sets 10 reps

"Hip Hinges:

The main goal is to use your posterior chain (glutes and hamstrings) to power the movement.

Try the variations and see which one feels good at this stage. Options include:

- feet shoulder width a part or wide*
- knees bent or straight*
- bodyweight/weight added*
- no pause/ isometric pause at bottom of each rep*

Cues:

- 1. Stand Tall with Neutral Spine.*
- 2. Engage your core muscles to stabilize your spine. Ensure your back is in a neutral position, neither rounded nor overly arched.*
- 3. Initiate the Movement from the Hips so as you start the hip hinge, push your hips back and lead forward with your chest.*

Nick Zervakis

Personal Workout Plan

4. Maintain a Soft Bend in the Knees unless you are very flexible and can keep the legs straight whilst hinging forward without rounding in the lower back.

5. Try to maintain a straight line from the crown of your head to your hips. "

Duck Walk

1 sets 1 min

"Cues:

From squat position take small steps forward, allow knee to come over toes and maintain upright torso.

This exercise can be challenging so don't worry if you are unable to do it just yet.

If done correctly it can be great for stretching the toes and opening up the hips. "

Rest 60 sec before continuing

Running

1 sets 5 km

"You can change the running for another form of cardio if you prefer. Let me know :)

Each kilometre, run at 80-90% of your max capacity for 800m and then slow the pace to a walk or slow jog for the final 200m of that kilometre.

Each session, Increase the number of km by 1 if you have the time and energy. "

Rest 120 sec before continuing

Seated glute/hip stretch

1 sets 20 breaths rest 60 sec

"This stretch covers a many muscles in the posterior hip capsule, such as the piriformis, and into the lower back. It can be done anytime to help with tight hips, sore/tight lower back or to just generally chill out.

Your hip that your are stretching may not touch the floor you could place a block or cushion underneath it.

Cues:

- Hug your thigh of the hip you are stretching close to you
- Sit tall with the torso by reaching up to the sky from the crown of your head

You should feel the stretch in the glute/outside of your hip of the stretching leg

Nick Zervakis

Personal Workout Plan

Progression:

- An advanced progression, to shower where you could get to one day when your shoulders and upper back also open up includes this bind option. "

Rest 60 sec before continuing

Calf Stretch (passive -> active -> weighted)

1 sets 90 sec

"Perform the passive calves stretch for 1-2 sets (depending on time), then perform the single/double leg active stretch after for 1-2 sets (again depending on how much time you have).

Passive calves stretch: Hold for 2 minutes on each side per set.

Single or double leg active stretch: Choose one which feels better for you. Perform 5-10 hinges per set and hold a small weight whilst you do the hinges if it feels good. Once you have done the hinges, add in a hold of 10-30 seconds at the end of the set, going deeper into the stretch every exhale.

Of course if doing single legs, repeat on both sides for the same duration with the same weight.

All information within the instructional video. "

Rest 30 sec before continuing

Leg lift hamstring stretch (weighted and non-weighted)

2 sets 90 sec

"Setup:

Have a sturdy box/bench/shelf in front of you. Stand facing the elevated surface with your feet hip-width apart. Hold a dumbbell or kettlebell in one hand.

Place the foot of the leg you want to stretch onto the elevated surface.

Toes of the stretching leg can be pointed up to the ceiling or pointed forwards.

Initiate the Movement:

Inhale and begin the exercise by hinging at your hips, sending them back and leaning forward.

Keep a slight bend in the knee of the foot on the box and a soft bend in the knee of the standing leg.

Nick Zervakis

Personal Workout Plan

Straighten out the knees if it feels okay and engage quad muscles.

Stretching the Hamstring:

As you lean forward, focus on feeling the stretch in the hamstring of the leg on the box.

Reach your free hand towards the floor or allow the weight to hang down to increase the stretch.

Maintain Control:

Avoid rounding your back or excessively arching your lower back during the stretch. Try to keep a neutral spine and lead with lower belly as you hinge forward rather than chest. As you fold forward, think of pulling your thigh bone towards the hip joint.

Breathing:

Your breath is really helpful for this stretch. Inhale as you initiate the movement by hinging at your hips.

Exhale as you deepen the stretch by leaning forward."

Rest 30 sec before continuing

Elongated Exhales

3 sets reps

"This superset trains three movements together in order to save time. Perform the superset for 3 sets in total. Perform each set of each exercise sequentially, with a 60 second rest between the sets. So do one set of exercise A, rest for 60 seconds do one set of exercise B, rest 60 seconds, do one set of exercise C, rest 60 seconds, then back to exercise A. "

Strength + Mobility: Lower Body 2

EXERCISE

Treadmill Power Walk

1 sets 10 min

*"*This exercise can also be substituted for any other form of moderate intensity cardio such as cycling, rowing or the cross trainer. I usually walk to the gym to do my workouts so treat that as my warmup.*"*

The purpose here is to raise your internal body temperature, elevate your heart rate and prepare to move in the workout.

It is not an essential part of the workout and should you be limited on time and feel warm and able to get straight into the rest of the warmup exercises then go for it and feel free to skip this part.

"

Rest 30 sec before continuing

Vinyasa options (x3)

1 sets 6 reps

"Instructions contained in video, let me know if you have any questions :)"

Choose the option suitable for you.

Down dog cues: you are trying to create an inverted V shape with your body.

- Feet and hands about hip width apart.

- Straighten legs as much as possible sending heels towards floor. Bending knees is absolutely fine, you should feel a stretch in the backs of the legs.

- PUSH the floor away with both hands to elevate the shoulder blades and wrap your elbows in by internally rotating your shoulders (imagine squeezing an orange in your armpit) and this should help engage your lats and shoulder muscles

- Active fingers - if someone came to you and tried to lift your finger up from the floor they should find this difficult - this is how you know your fingers are active.

- Look at the space between your feet and ensure a neutral spine from top of head to base of spine. "

Rest 30 sec before continuing

Lizard Lunge Variations

1 sets 120 sec

"3 progressions of the lizard lunge, an amazing exercise to open up and strengthen hip flexors and

Nick Zervakis

Personal Workout Plan

quads in the third variation:

- 1. Back knee on floor - option to have arms fully extended with hands on floor, or walk hands forward to go deeper, or drop to elbows to get deeper still. In all variations, send chest as close to the ground as possible on your exhales.*
- 2. Same as above but back knee stays lifted to make it more demanding on your leg and hip strength. Great for building more mobility aka strength in the position.*
- 3. After holding stretch 1 or 2 for the allotted time, you could add in an extra stretch for the quad muscles of the back leg by taking a bind. You may or may not be able to reach for this. If you can't reach you could use a strap. The more open you get the more you will be able to access this variation. Each time you exhale, pull your foot closer to your bum. "*

Rest 30 sec before continuing

Lunge rotations

1 sets 6-10 reps

"Setup:

Adopt a lunge position on the floor and imagine a string pulling you up to the ceiling/sky from the crown of your head.

Cues:

Breathe in and as you exhale twist as far to one side as is comfortable and as you inhale come back to face the centre with your torso.

Perform 6-10 reps on one side then include the hold, again using your exhales to twist a little further as you push the back of the hand into the outer thigh. Repeat both sides. "

Rest 30 sec before continuing

Weighted Butterfly

3 sets 8-10 reps

"All cues contained in video. "

Rest 60 sec before continuing

Superset

2
rounds

"Perform exercises A and B back to back"

Long Lunge Hip Strengtheners

60 sec

rest 60 sec

"Cues:

Nick Zervakis

Personal Workout Plan

- Adopt a long lunge position
- Front knee should not go past the toes
- Sink low into your hips, pushing them to the floor but making sure to squeeze your glutes HARD
- You can take small pulses forwards and back or stay in a more static position
- Breathe with control and on your exhales try to sink your hips slightly lower to the floor.

You should feel this in the quad, thigh and hip flexor of the back leg as well as the thigh of the front leg. The sensation should be one of stretch and strengthening.

Adding weight is an option as you get stronger. "

Single leg hip hinge (weighted)

6-8 reps

rest 60 sec

"Setup: Step one foot forward and place foot firmly to floor, front toes facing forwards. Back leg toes can be angled out slightly. Widen stance enough to feel stable.

Cues:

- Send hips back as you lead your torso down to the floor. Lead with your chest.
- Try to keep front leg as straight as possible, back leg can bend as much as needed
- Try to keep a neutral spine as much as possible as you lower the torso. When it starts to round excessively, lift torso back up to the top of the movement to the starting position.
- When lifting the torso back up, push the front foot HARD into the floor to initiate the movement.
- Engage your quad muscles of the front leg as much as possible throughout the movement. "

Rest 90 sec before continuing

Superset

2
rounds

"Adductor and Hip focused superset "

Adductor Floor Stretch (2 variations)

60-90 sec

rest 60 sec

"2 Variations to try:

1. The first one sees you extend one leg fully out to the side, whilst using the toes to support on the other leg which is bent (see 21 second mark of video). This variation will tend to focus most of the stretch on the adductor (inner thigh) of the leg outstretched.

Variation 2 offers a stretch for both adductors of both legs at the same time as the toe foot of the bent

Nick Zervakis

Personal Workout Plan

leg is turned out to the side (see 54 second mark of video).

Cues for both:

- Try to be quite light on your hands - Squeeze the quad muscle of the leg you are stretching.*
- Try to tilt your pelvis to an anterior position (so up towards ceiling) "*

Seated glute/hip stretch

60 sec

rest 60 sec

"This stretch covers a many muscles in the posterior hip capsule, such as the piriformis, and into the lower back. It can be done anytime to help with tight hips, sore/tight lower back or to just generally chill out.

Your hip that your are stretching may not touch the floor you could place a block or cushion underneath it.

Cues:

- Hug your thigh of the hip you are stretching close to you*
- Sit tall with the torso by reaching up to the sky from the crown of your head*

You should feel the stretch in the glute/outside of your hip of the stretching leg

Progression:

- An advanced progression, to shower where you could get to one day when your shoulders and upper back also open up includes this bind option. "*

Rest 60 sec before continuing

Seated wide leg forward fold

2 sets 60 sec

rest 30 sec

"Starting Position: Sit on an elevated surface (easier) or the floor (harder) with your legs extended out wide in a "V" shape.

3 options (choose the one that is most comfortable for you):

- 1- Hands just in front on floor*
- 2- Walk hands away from you*
- 3- Hands behind hips*

Nick Zervakis

Personal Workout Plan

Sit Tall: Sit up tall with a straight back, engaging your core to maintain good posture throughout the exercise.

Shoulders Back: Roll your shoulders back and down to avoid hunching forward and adopt anterior pelvic tilt if possible by tilting your pelvis backwards

Hinge at the Hips: Inhale and hinge at your hips to lean forward, leading with your chest. Keep your back as straight as possible as you lower your torso toward the floor.

Engage the Legs: As you fold forward, engage your inner thighs and engage the quadriceps (front thigh muscles) to support the movement.

Controlled Descent: Lower your torso toward the floor in a controlled manner. Focus on feeling a gentle stretch in your hamstrings and inner thighs. Go as low as you can whilst keeping a straight spine.

Avoid Overstretching: Be mindful not to push yourself into an excessive stretch or go beyond your comfortable range of motion.

Breathing: Exhale as you fold forward a little deeper into the stretch.

Use your breath and perform for 30-120 seconds for each set, getting deeper into the position every round of breath.

Added notes - Try next time sitting up against a wall with your legs out in front of you. Try and keep your back flat against the wall and legs straight. If this still feels hard bring your pelvis slightly away from the wall.

Also try pointing your toes instead of flexing as this will also help a little bit, it'll take the nerve stretch out of it too. "

Rest 60 sec before continuing

Seated wide leg forward fold (weighted)

2 sets 30 sec

rest 30 sec

"Starting Position: Sit on an elevated surface (easier) or the floor (harder) with your legs extended out wide in a "V" shape.

Hold a weight in front or behind you (your choice but don't allow it to round your upper back by holding

Nick Zervakis

Personal Workout Plan

it).

Cues:

- Bend the knees slightly with toes facing up (easier) or lock the legs (harder)

Sit Tall: Sit up tall with a straight back, engaging your core to maintain good posture throughout the exercise.

Shoulders Back: Roll your shoulders back and down to avoid hunching forward and adopt anterior pelvic tilt if possible by tilting your pelvis backwards

Hinge at the Hips: Inhale and hinge at your hips to lean forward, leading with your chest. Keep your back as straight as possible as you lower your torso toward the floor.

Engage the Legs: As you fold forward, engage your inner thighs and engage the quadriceps (front thigh muscles) to support the movement.

Controlled Descent: Lower your torso toward the floor in a controlled manner. Focus on feeling a gentle stretch in your hamstrings and inner thighs. Go as low as you can whilst keeping a straight spine.

Avoid Overstretching: Be mindful not to push yourself into an excessive stretch or go beyond your comfortable range of motion.

Breathing: Exhale as you fold forward and inhale as you return to the starting position."

Rest 60 sec before continuing

Superset

**3
rounds**

"Perform back to back with a 90 second rest between each set"

Front Split Hold (weighted)

30-120 sec rest 60 sec

"Front Split Eccentric with weight added:

Gradually lower down into your deepest front split holding a small weight.

You can place yourself near a wall and lightly touch it with your hand or fingertips to help you balance.

Nick Zervakis

Personal Workout Plan

Go as low as you can whilst holding the weight and use the weight to help you drop a little deeper into the splits position and build strength there. You may find that extending the weight above your head helps you get a bit deeper into the position too, by opening up your hip flexors more.

Once you get rid of the weight, you can use yoga blocks or hands on the floor to support you to hold the position a little longer.

Cues:

- Hips should remain square as possible*
- Torso upright, but if you wish to fold forwards over your front leg towards the end of the set to work more into developing hamstring flexibility then you are welcome to do this.*
- Try to keep your quads and glute muscles engaged throughout.*
- Try to not hyperextend your knee of the front leg, keep a slight bend if you are dumping into it"*

Middle Splits Slides + Hold

3-5 reps

rest 60 sec

"Perform 3 slides with a 10 second hold for each rep.

You will do x3 slides, using your hands to support you as little as possible and trying to use your leg muscles to move you from a wide split to a closed splits stance. Squeeze your adductors (inner thighs) to lift your hips high each rep.

Setup:

Find a surface that is not too grippy - in the video I use socks on a polished surface.

Initiating the movement:

Stand up with your feet pointing out in opposite directions at about a 45 degree angle.

Gradually allow your feet to slide apart, whilst maintaining an upright torso and anterior pelvic tilt. This is very important to allow space for you thigh bones to move in the hip joint and create the space for you to go deeper into the position. Anterior tilt is where your hips tilt backwards and your lower back arches a little, your bum 'sticks out'.

As you lower down deeper into the middle splits position, try to keep your glutes and quad muscles engaged - though this will be hard. Don't just let gravity do the work though. Try to actively push your feet wider.

Nick Zervakis

Personal Workout Plan

Squeeze your inner thighs together to lift your hips out of the wide middle splits position.

Once you have done x3 slides, pause in the wide splits position for 10 seconds, before doing the next rep of slides and hold.

Torso should stay upright throughout the set. Avoid folding forwards too much.

"

Rest 60 sec before continuing

Plow pose

1 sets 10-20 breaths

"Starting Position:

Begin by lying flat on your back with your arms resting alongside your body, palms facing down.

Keep your legs together and feet together.

Initiate the Movement:

Inhale deeply, and as you exhale, start lifting your legs and hips off the ground, rolling your pelvis towards your chest.

Use your abdominal strength to initiate the movement, lifting your legs over your head and push your hands into the floor to support the movement if you need to.

Legs Overhead:

Continue lifting your legs until they are overhead and reaching towards the floor behind you.

Your feet should be over your head, and your toes may touch the floor if you have sufficient flexibility or your anatomy allows. It is not essential that your feet touch the floor you just want to feel stretch in either the neck, back, shoulders or hamstrings.

Support Your Back:

Place your hands on your lower back for support, with your elbows close together and forearms pressing into the ground.

Nick Zervakis

Personal Workout Plan

Keep your weight on your shoulders and upper arms, not on your neck.

Breathe and Relax:

Breathe deeply and relax into the pose. Soften your face, jaw, and neck.

To progress the pose you can try bending your legs at the knees and bringing your thighs closer to your torso. "

Rest 30 sec before continuing

Elongated Exhales

1 sets 10-30 reps

"Elongated exhales are an amazing way to activate your parasympathetic nervous system aka your 'rest and digest' state.

They're a simple but very effective tool you can use when you are feeling stressed/anxious to reset yourself, but are also great to do at the end of a workout to start the recovery process immediately by taking your body and nervous system down from its high energy state from the workout.

Cues:

Sit or lay down (If sitting find a tall spine or sit against a wall if it helps).

Close your eyes or take your gaze to a fixed spot e.g. the wall in front of you.

Focus on the sensations of breathing (eg air coming into your nose, descending down into your lungs and back out again).

For up to 10-30 rounds of breath, exhale for twice the length of your inhale.

For example you could:

- Inhale for a count of 2, exhale for a count of 4*
- Inhale for a count of 3, exhale for a count of 6*

The number is less important, it's more important that the exhale is more prolonged than the inhale. This signals to your nervous system it is okay to relax :) "

Mobility: Upper Body Focus (Gym)

EXERCISE

Treadmill Power Walk

1 sets 10 min

*"*This exercise can also be substituted for any other form of moderate intensity cardio such as cycling, rowing or the cross trainer. I usually walk to the gym to do my workouts so treat that as my warmup.*"*

The purpose here is to raise your internal body temperature, elevate your heart rate and prepare to move in the workout.

It is not an essential part of the workout and should you be limited on time and feel warm and able to get straight into the rest of the warmup exercises then go for it and feel free to skip this part.

"

Rest 30 sec before continuing

Wrist strengthening sequence

2 sets 3-8 reps

"These wrist exercises are quite advanced and so let me know if they cause too much discomfort.

Progress through each variation and perform 3-8 reps of each.

Variation 1: Palm lifts - make harder by moving shoulders further forwards over your hands (push all ten fingertips into floor)

Variation 2: Back of hands on floor. Bend at elbows as low as is comfortable and push back up

Variation 3: Same as variation 2 but make a fist at the top of each rep"

Rest 30 sec before continuing

Vinyasa options (x3)

2 sets 5 reps

rest 60 sec

"Instructions contained in video, let me know if you have any questions :)"

Choose the option suitable for you.

Down dog cues: you are trying to create an inverted V shape with your body.

Nick Zervakis

Personal Workout Plan

- Feet and hands about hip width apart.
- Straighten legs as much as possible sending heels towards floor. Bending knees is absolutely fine, you should feel a stretch in the backs of the legs.
- PUSH the floor away with both hands to elevate the shoulder blades and wrap your elbows in by internally rotating your shoulders (imagine squeezing an orange in your armpit) and this should help engage your lats and shoulder muscles
- Active fingers - if someone came to you and tried to lift your finger up from the floor they should find this difficult - this is how you know your fingers are active.
- Look at the space between your feet and ensure a neutral spine from top of head to base of spine. "

Rest 30 sec before continuing

Up Dog (Wall Assisted)

2 sets 20-60 sec rest 30 sec

"*Audio instructions in video*"

Rest 30 sec before continuing

Banded Upper Body Warmup Routine

2 sets 10-20 reps rest 60 sec

"*Audio on for video*"

Perform 10-20 reps of each of the following movements:

1. Elevated Pull Aparts
2. Face Pulls
3. Rows
4. Rotations
5. Pullovers
6. Internal Rotations
7. External Rotations"

Rest 60 sec before continuing

Superset

2
rounds

"Perform these 3 core exercises back to back"

Bodyweight Glute Bridge

30-60 sec rest 30 sec

"Setup:

- Have your feet placed on the floor at a distance where you can reach to touch the back of your heels with your fingers and just make contact.

Nick Zervakis

Personal Workout Plan

Cues:

- *Breathe in deep and as you exhale engage your glute muscles and thrust your hips to the ceiling.*
- *Inhale as you lower your bum back down to the floor.*

Throughout all reps ensure you squeeze your thighs together. They shouldn't be touching, but this cue to avoid the thighs flaring out to the sides.

- *On your final rep, hold in the top position (hips thrust up) for a count of 10 seconds.*

Progressions:

- *Once you are able to comfortably perform this exercise for reps, try doing a single leg glute bridge.*
- *Remember THURST YOUR HIPS HIGH!"*

Locust pose (3 Variations)

30-60 sec

rest 30 sec

"Lay flat on your front and choose one of the three variations to perform.

The variations get more intense each time, but choose one in which you feel suits the intensity required to strengthen your lower and upper back.

Variation 1: arms extended behind you with thumbs facing up (shoulders in external rotation)

Variation 2: arms bent at 90 degrees, thumbs facing the sky, retract shoulder blades as you lift up.

Variation 3: arms extended ahead of you with thumbs facing up

Cues for all variations:

1. Take a breath in and as you breathe out lift your chest as high as you can and lift your feet off the floor and thighs off the floor as much as possible (they may not even come off the floor when first trying this exercise. Try to create a curved C-shape with your body from your feet to your head.

ALWAYS squeeze your glutes hard in this position to protect your lower back and build strength.

Perform for reps but as in the video, hold the top position for 2-3 seconds each rep.

Nick Zervakis

Personal Workout Plan

You may wish to decompress your spine after performing this exercise by trying a child's pose or rag doll pose. "

Side flexion (arms extended)

10 reps

rest 30 sec

"Practice this exercise first without weight and when comfortable you can add weight.

Hold the weight above your head, breathe in and elevate shoulder blades, lifting the weight as high up as you can.

As you exhale, bend to the side trying to keep arms as straight as possible and finding a stretch in the sides of the torso. Try not to let your hips come forward or back, keep them square.

Side bend as low as comfortable, with control and use the muscles in the sides of your back to lift your torso back upright on each inhale.

Benefits: Side flexion involves flexibility in triceps, lats and obliques and will strengthen your core strength. While there are plenty of exercises using body weight only using extra resistance can make the stretch deeper as well as make muscles stronger in that range of movement.

"

Rest 60 sec before continuing

Superset

2
rounds

Cuban rotations

6-8 reps

rest 60 sec

"A great shoulder mobility exercise that targets the rotator cuff muscles.

Cues:

Engage Your Core: Brace your core muscles to stabilize your spine throughout the movement. Keep your torso upright and avoid arching your lower back.

Rotational Movement: As you rotate in the movement, retract your shoulder blade back. Aim to keep your elbows at shoulder height.

The emphasis with this exercise should be on maintaining proper form and control rather than using heavy weights."

Nick Zervakis

Personal Workout Plan

Lunge Backbend

20-40 sec

rest 45 sec

"Setup:

Adopt a low lunge position. Push the top of the trailing foot firmly into the ground to stay stable.

Engage your glutes throughout this movement.

Place hands on your hips and squeeze your elbows to the centre line of your body.

Execution:

You are trying to keep your lower body lunge position static, whilst adopting a backbend in the upper body.

Look up at the ceiling and then allow your head to fall back and PUSH your chest up high to the ceiling. You want to create as much curve in your spine as possible. It will be hard to breathe in this position so aim to stay in the backbend position for at least 1-3 breaths each rep.

OPTIONAL: At the end of the set you can add in a longer backbend hold for up to 10 beaths.

Repeat both sides. "

Wheel Pose Progressions (Feet elevated)

3 sets 15-60 sec

rest 60 sec

*"*Audio instructions in video*"*

Rest 60 sec before continuing

Superset

2
rounds

"Perform these exercises back to back. "

Face pulls (cable)

6-8 reps

rest 60 sec

"Choose a suitable weight and sit or stand away from the rack.

I prefer sitting as it creates a more solid base but your preference.

Maintain an upright posture with a slight bend in your knees.

Engage your core to stabilize your torso throughout the movement.

Nick Zervakis

Personal Workout Plan

Keep your chest up and your shoulders relaxed.

Start with your arms fully extended and at shoulder height.

Initiate the movement by retracting your scapulae (pulling your shoulder blades back and together) while keeping your arms straight.

Focus on leading the movement with your elbows rather than your hands.

Imagine pulling both fist a bit wider than each ear.

There are three variations to pull towards:

Forehead

Mid-face

Below Chin

Try them out and see which gives you more engagement in the upper back muscles or use all three. For example in this video I did x5 reps of each variation (15 reps total).

Squeeze your shoulder blades together at the end of the movement to fully engage the target muscles.

Control the weight as you return to the starting position, allowing your arms to fully extend.

Keep back neutral and avoid leaning forward and back with each rep.

HOLD the last rep for 10 seconds for extra gains :)"

Plank side taps

6-12 reps

"Instructions in video. "

Rest 60 sec before continuing

Eagle Hang (passive -> active)

2 sets 10-30 sec rest 30 sec

"The first progression is partial load hangs. Leave your feet just barely on the ground or a box and hold for time.

Nick Zervakis

Personal Workout Plan

Progression two is where you can place your feet on the ground again but perform inlocates where you'll roll your shoulders forward and press your hips up behind you with your weight partially on the ground or a box again.

Progression three is to progress to hanging without the feet. Take your time building up to this. A little goes a long way.

Progression four will have you doing the above but with NO foot assistance again."

Rest 30 sec before continuing

Elongated Exhales

1 sets 10-30 breaths

"Elongated exhales are an amazing way to activate your parasympathetic nervous system aka your 'rest and digest' state.

They're a simple but very effective tool you can use when you are feeling stressed/anxious to reset yourself, but are also great to do at the end of a workout to start the recovery process immediately by taking your body and nervous system down from its high energy state from the workout.

Cues:

Sit or lay down (If sitting find a tall spine or sit against a wall if it helps).

Close your eyes or take your gaze to a fixed spot e.g. the wall in front of you.

Focus on the sensations of breathing (eg air coming into your nose, descending down into your lungs and back out again).

For up to 10-30 rounds of breath, exhale for twice the length of your inhale.

For example you could:

- Inhale for a count of 2, exhale for a count of 4*
- Inhale for a count of 3, exhale for a count of 6*

The number is less important, it's more important that the exhale is more prolonged than the inhale. This signals to your nervous system it is okay to relax :) "

Detailed program

Strength + Mobility: Lower Body Focus 1

Assault Bike (Fan bike)

1 sets x 100 kcal

"Complete as fast as you can, starting slow, increasing intensity throughout the set as you get warm. Try to beat your time from the previous session each week to hit 100cals. "

[Video explanation](#)

Rest 60 sec before continuing

Duck Walk

2 sets x 30 sec (rest 30 sec)

"Cues:

From squat position take small steps forward, allow knee to come over toes and maintain upright torso.

This exercise can be challenging so dont worry if you are unable to do it just yet.

[Video explanation](#)

If done correctly it can be great for stretching the toes and opening up the hips. "

Rest 30 sec before continuing

Internal Hip Rotation Progressions (seated -> squat)

2 sets x 10-20 reps (rest 30 sec)

"Variation 1 - Seated version:

Cues:

Sit on floor with hands behind your hips and use

[Video explanation](#)

this to sit your torso as upright as possible.

Legs are bent, feet on the floor. Feet can be placed slightly wider than hips.

Allow knee to come inwards down to the floor to internally rotate the leg in the hip joint. Try to limit how much your torso rotates in the direction of the stretch and get knee as close to the floor as possible. This is your femur bone rotating internally towards the floor.

Perform the rotation for 10-20 reps each side and then include a hold at the end of the set for around 30 seconds.

You should feel the stretch in your adductors and/or hips and will likely feel some sensations in the knee. Avoid pain but tightness is fine.

Variation 2 - Hips raised version:

The same as variation 1, but you lift your hips into the air to make the exercise more intense.

Variation 3 - Perform the internal rotation from a squat position.

Variation 4 - Perform the squat variation but allow both your hips to lower to the floor and find an external rotation with the opposition hip. Use your hands or fingertips to support you.

Variation 5 - Same as variation 4 but perform without the support of your hands or fingertips on

Nick Zervakis

Personal Workout Plan

the floor. "

Rest 30 sec before continuing

Hip Hinges

2 sets x 6-8 reps (rest 30 sec)

"Hip Hinges:

The main goal is to use your posterior chain (glutes and hamstrings) to power the movement.

Try the variations and see which one feels good at this stage. Options include:

- feet shoulder width apart or wide*
- knees bent or straight*
- bodyweight/weight added*
- no pause/ isometric pause at bottom of each rep*

Cues:

- 1. Stand Tall with Neutral Spine.*
- 2. Engage your core muscles to stabilize your spine. Ensure your back is in a neutral position, neither rounded nor overly arched.*
- 3. Initiate the Movement from the Hips so as you start the hip hinge, push your hips back and lead forward with your chest.*
- 4. Maintain a Soft Bend in the Knees unless you are very flexible and can keep the legs straight whilst hinging forward without rounding in the lower back.*
- 5. Try to maintain a straight line from the crown of your head to your hips. "*

Wrist mobility (9 movements)

2 sets x 2 min (rest 60 sec)

"The instructional video is an overview of a wrist mobility and stretch sequence containing 9 variations.

Depending on your wrist strength and mobility different variations will feel more/less challenging.

I recommend choosing 2-5 of these movements and performing them in one go, spending 20-60 seconds performing each of the chosen wrist exercises, depending on how they feel.

For those with a dynamic movement (e.g. wrist rocks with fists clenched or palm lifts), move GENTLY though the movement. To make them harder, lean you shoulders more forwards to add the intensity of demand onto your wrists.

To finish or within the set, shake out your hands and avoid creating any pain in your wrists.

[Video explanation](#)

Nick Zervakis

Personal Workout Plan

Remember, this is a WARM-UP, not a workout. Do enough to warm up and stretch your wrist, but not enough to hurt or fatigue them. You don't want them tired before you train.

You just want strength, mobility, and warmth."
Rest 30 sec before continuing

Spinal rotation movements (dynamic + passive)

1 sets x 10 reps

"Choose a variation that feels good and remember to perform on both sides.

Combine repetitions with a hold in the twist position of 15-30 seconds at the end of the set if it feels comfortable.

Twist further on your exhales. "

Scapula movements

1 sets x 40 reps

"Hold a small weight in each hand to progress these movements and build shoulder strength (1-4kg)

Perform these movements for up to 10 reps per movement (so up to 40 total):

Retraction

Protraction

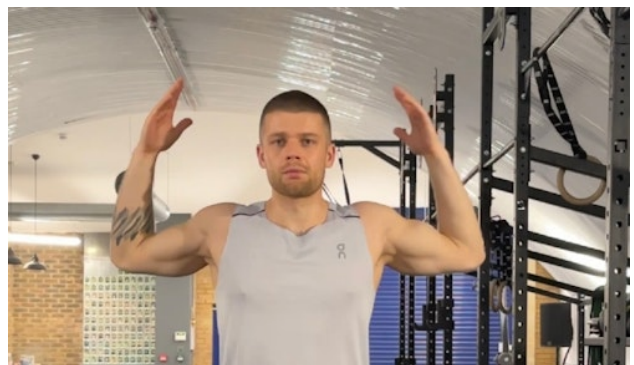

Elevation

Depression

"

Video explanation

Video explanation

Nick Zervakis

Personal Workout Plan

Rest 30 sec before continuing

Hanging shrugs

2 sets x 5-10 reps

"Starting Position:

Hang from a pull-up bar or rings with an overhand grip (palms facing away from you).

Allow your body to fully extend, and your feet should not touch the ground. HOWEVER If this exercise is too challenging to perform with feet off the floor, you should place a small step or box under you and place your toes or feet onto it JUST enough to support you in the position as you do the shrugs. Try to use as little support from the feet as possible so you build your strength in your shoulders.

Engage Core and Maintain Body Alignment:

Tilt your pelvis forwards (anterior tilt) to engage core and build shoulder mobility.

Maintain a straight body alignment from head to heels. Avoid excessive swinging or arching of your back.

Initiate the Movement:

Begin the exercise by actively pulling your shoulder blades down and back.

Imagine you are trying to squeeze a pen between your shoulder blades.

Shrug Movement:

Reverse the movement by elevating your shoulder

[Video explanation](#)

Nick Zervakis

Personal Workout Plan

blades towards your ears, contracting your upper back muscles.

Keep your arms straight throughout the movement.

Avoid fully relaxing your shoulders at the bottom to maintain tension on the muscles.

Focus on the muscles in your upper back to lift and lower your shoulder blades."

workout to start the recovery process immediately by taking your body and nervous system down from its high energy state from the workout.

Cues:

Sit or lay down (If sitting find a tall spine or sit against a wall if it helps).

Close your eyes or take your gaze to a fixed spot e.g. the wall in front of you.

Focus on the sensations of breathing (eg air coming into your nose, descending down into your lungs and back out again).

For up to 10-30 rounds of breath, exhale for twice the length of your inhale.

For example you could:

- Inhale for a count of 2, exhale for a count of 4*
- Inhale for a count of 3, exhale for a count of 6*

The number is less important, it's more important that the exhale is more prolonged than the inhale.

This signals to your nervous system it is okay to relax :) "

Nick Zervakis

Personal Workout Plan

Sprint Session

Leg swings

1 sets x 10 reps

"Hold onto a solid surface with one arm.

Swing legs in three directions for up to 10 reps on each leg per direction.

For the forward and side swing movements, you could throw in a hold on the final rep of 10-30 seconds, trying to lift the leg as high as you can in front of you or to the side, to build up strength in this position. If doing a hold, remember to breath and lift the foot as high as possible.

Try to keep the legs almost straight but with a slight bend.

Don't kick so hard you hurt your hamstrings or groin, start gentle and get more energetic with the movement each swing. "

Rest 60 sec before continuing

[Video explanation](#)

Hip Hinges

1 sets x 10 reps

"Hip Hinges:

The main goal is to use your posterior chain (glutes and hamstrings) to power the movement.

Try the variations and see which one feels good at this stage. Options include:

- feet shoulder width a part or wide*
- knees bent or straight*
- bodyweight/weight added*

[Video explanation](#)

Nick Zervakis

Personal Workout Plan

- no pause/ isometric pause at bottom of each rep

Cues:

1. Stand Tall with Neutral Spine.
2. Engage your core muscles to stabilize your spine. Ensure your back is in a neutral position, neither rounded nor overly arched.
3. Initiate the Movement from the Hips so as you start the hip hinge, push your hips back and lead forward with your chest.
4. Maintain a Soft Bend in the Knees unless you are very flexible and can keep the legs straight whilst hinging forward without rounding in the lower back.
5. Try to maintain a straight line from the crown of your head to your hips. "

Duck Walk

1 sets x 1 min

"Cues:

From squat position take small steps forward, allow knee to come over toes and maintain upright torso.

This exercise can be challenging so don't worry if you are unable to do it just yet.

If done correctly it can be great for stretching the toes and opening up the hips. "

Rest 60 sec before continuing

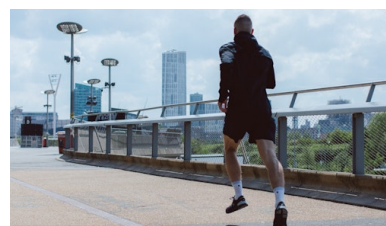

Running

1 sets x 5 km

"You can change the running for another form of cardio if you prefer. Let me know :)"

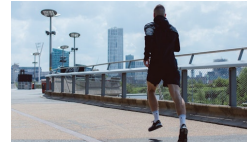

[Video explanation](#)

Nick Zervakis

Personal Workout Plan

Each kilometre, run at 80-90% of your max capacity for 800m and then slow the pace to a walk or slow jog for the final 200m of that kilometre.

[Video explanation](#)

Each session, Increase the number of km by 1 if you have the time and energy. "
Rest 120 sec before continuing

Seated glute/hip stretch

1 sets x 20 breaths (rest 60 sec)

"This stretch covers a many muscles in the posterior hip capsule, such as the piriformis, and into the lower back. It can be done anytime to help with tight hips, sore/tight lower back or to just generally chill out.

[Video explanation](#)

Your hip that your are stretching may not touch the floor you could place a block or cushion underneath it.

Cues:

- Hug your thigh of the hip you are stretching close to you
- Sit tall with the torso by reaching up to the sky from the crown of your head

You should feel the stretch in the glute/outside of your hip of the stretching leg

Progression:

- An advanced progression, to shower where you could get to one day when your shoulders and

Nick Zervakis

Personal Workout Plan

upper back also open up includes this bind option. "
Rest 60 sec before continuing

Calf Stretch (passive -> active -> weighted)

1 sets x 90 sec

"Perform the passive calves stretch for 1-2 sets (depending on time), then perform the single/double leg active stretch after for 1-2 sets (again depending on how much time you have).

Passive calves stretch: Hold for 2 minutes on each side per set.

Single or double leg active stretch: Choose one which feels better for you. Perform 5-10 hinges per set and hold a small weight whilst you do the hinges if it feels good. Once you have done the hinges, add in a hold of 10-30 seconds at the end of the set, going deeper into the stretch every exhale.

Of course if doing single legs, repeat on both sides for the same duration with the same weight.

All information within the instructional video. "
Rest 30 sec before continuing

Leg lift hamstring stretch (weighted and non-weighted)

2 sets x 90 sec

"Setup:

Have a sturdy box/bench/shelf in front of you. Stand facing the elevated surface with your feet hip-width apart. Hold a dumbbell or kettlebell in one hand.

[Video explanation](#)

[Video explanation](#)

Place the foot of the leg you want to stretch onto the elevated surface.

Toes of the stretching leg can be pointed up to the ceiling or pointed forwards.

Initiate the Movement:

Inhale and begin the exercise by hinging at your hips, sending them back and leaning forward.

Keep a slight bend in the knee of the foot on the box and a soft bend in the knee of the standing leg. Straighten out the knees if it feels okay and engage quad muscles.

Stretching the Hamstring:

As you lean forward, focus on feeling the stretch in the hamstring of the leg on the box.

Reach your free hand towards the floor or allow the weight to hang down to increase the stretch.

Maintain Control:

Avoid rounding your back or excessively arching your lower back during the stretch. Try to keep a neutral spine and lead with lower belly as you hinge forward rather than chest. As you fold forward, think of pulling your thigh bone towards the hip joint.

Breathing:

Your breath is really helpful for this stretch. Inhale as you initiate the movement by hinging at your hips. Exhale as you deepen the stretch by leaning forward."

Elongated Exhales

3 sets x reps

"This superset trains three movements together in order to save time. Perform the superset for 3 sets in total. Perform each set of each exercise sequentially, with a 60 second rest between the sets. So do one set of exercise A, rest for 60 seconds do one set of exercise B, rest 60 seconds, do one set of exercise C, rest 60 seconds, then back to exercise A. "

Nick Zervakis

Personal Workout Plan

Strength + Mobility: Lower Body 2

Treadmill Power Walk

1 sets x 10 min

*"*This exercise can also be substituted for any other form of moderate intensity cardio such as cycling, rowing or the cross trainer. I usually walk to the gym to do my workouts so treat that as my warmup.**

The purpose here is to raise your internal body temperature, elevate your heart rate and prepare to move in the workout.

It is not an essential part of the workout and should you be limited on time and feel warm and able to get straight into the rest of the warmup exercises then go for it and feel free to skip this part.

"

Rest 30 sec before continuing

Vinyasa options (x3)

1 sets x 6 reps

"Instructions contained in video, let me know if you have any questions :)

Choose the option suitable for you.

Down dog cues: you are trying to create an inverted V shape with your body.

- Feet and hands about hip width apart.*
- Straighten legs as much as possible sending heels towards floor. Bending knees is absolutely fine, you should feel a stretch in the backs of the legs.*
- PUSH the floor away with both hands to elevate*

[Video explanation](#)

the shoulder blades and wrap your elbows in by internally rotating your shoulders (imagine squeezing an orange in your armpit) and this should help engage your lats and shoulder muscles

- Active fingers - if someone came to you and tried to lift your finger up from the floor they should find this difficult - this is how you know your fingers are active.

- Look at the space between your feet and ensure a neutral spine from top of head to base of spine. "

Rest 30 sec before continuing

Lizard Lunge Variations

1 sets x 120 sec

"3 progressions of the lizard lunge, an amazing exercise to open up and strengthen hip flexors and quads in the third variation:

1. Back knee on floor - option to have arms fully extended with hands on floor, or walk hands forward to go deeper, or drop to elbows to get deeper still. In all variations, send chest as close to the ground as possible on your exhales.

2. Same as above but back knee stays lifted to make it more demanding on your leg and hip strength. Great for building more mobility aka strength in the position.

3. After holding stretch 1 or 2 for the allotted time, you could add in an extra stretch for the quad muscles of the back leg by taking a bind. You may or may not be able to reach for this. If you can't reach you could use a strap. The more open you get the more you will be able to access this variation. Each time you exhale, pull your foot

closer to your bum. "

Rest 30 sec before continuing

Lunge rotations

1 sets x 6-10 reps

"Setup:

Adopt a lunge position on the floor and imagine a string pulling you up to the ceiling/sky from the crown of your head.

Cues:

Breathe in and as you exhale twist as far to one side as is comfortable and as you inhale come back to face the centre with your torso.

Perform 6-10 reps on one side then include the hold, again using your exhales to twist a little further as you push the back of the hand into the outer thigh. Repeat both sides. "

Rest 30 sec before continuing

Weighted Butterfly

Rest 60 sec before continuing

Seated wide leg forward fold

2 sets x 60 sec (rest 30 sec)

"Starting Position: Sit on an elevated surface

Nick Zervakis

Personal Workout Plan

(easier) or the floor (harder) with your legs extended out wide in a "V" shape.

3 options (choose the one that is most comfortable for you):

- 1- Hands just in front on floor*
- 2- Walk hands away from you*
- 3- Hands behind hips*

Sit Tall: Sit up tall with a straight back, engaging your core to maintain good posture throughout the exercise.

Shoulders Back: Roll your shoulders back and down to avoid hunching forward and adopt anterior pelvic tilt if possible by tilting your pelvis backwards

Hinge at the Hips: Inhale and hinge at your hips to lean forward, leading with your chest. Keep your back as straight as possible as you lower your torso toward the floor.

Engage the Legs: As you fold forward, engage your inner thighs and engage the quadriceps (front thigh muscles) to support the movement.

Controlled Descent: Lower your torso toward the floor in a controlled manner. Focus on feeling a gentle stretch in your hamstrings and inner thighs. Go as low as you can whilst keeping a straight spine.

Avoid Overstretching: Be mindful not to push yourself into an excessive stretch or go beyond your

[Video explanation](#)

Nick Zervakis

Personal Workout Plan

comfortable range of motion.

Breathing: Exhale as you fold forward a little deeper into the stretch.

Use your breath and perform for 30-120 seconds for each set, getting deeper into the position every round of breath.

Added notes - Try next time sitting up against a wall with your legs out in front of you. Try and keep your back flat against the wall and legs straight. If this still feels hard bring your pelvis slightly away from the wall.

Also try pointing your toes instead of flexing as this will also help a little bit, it'll take the nerve stretch out of it too. "

Rest 60 sec before continuing

Seated wide leg forward fold (weighted)

2 sets x 30 sec (rest 30 sec)

"Starting Position: Sit on an elevated surface (easier) or the floor (harder) with your legs extended out wide in a "V" shape.

Hold a weight in front or behind you (your choice but don't allow it to round your upper back by holding it).

Cues:

- Bend the knees slightly with toes facing up (easier) or lock the legs (harder)

Sit Tall: Sit up tall with a straight back, engaging

Rest 60 sec before continuing

Plow pose

1 sets x 10-20 breaths

"Starting Position:

Begin by lying flat on your back with your arms resting alongside your body, palms facing down.

Keep your legs together and feet together.

Initiate the Movement:

Inhale deeply, and as you exhale, start lifting your legs and hips off the ground, rolling your pelvis towards your chest.

Use your abdominal strength to initiate the movement, lifting your legs over your head and push your hands into the floor to support the movement if you need to.

Legs Overhead:

Continue lifting your legs until they are overhead and reaching towards the floor behind you.

Video explanation

Nick Zervakis

Personal Workout Plan

Your feet should be over your head, and your toes may touch the floor if you have sufficient flexibility or your anatomy allows. It is not essential that your feet touch the floor you just want to feel stretch in either the neck, back, shoulders or hamstrings.

Support Your Back:

Place your hands on your lower back for support, with your elbows close together and forearms pressing into the ground.

Keep your weight on your shoulders and upper arms, not on your neck.

Breathe and Relax:

Breathe deeply and relax into the pose. Soften your face, jaw, and neck.

To progress the pose you can try bending your legs at the knees and bringing your thighs closer to your torso. "

Rest 30 sec before continuing

Elongated Exhales

1 sets x 10-30 reps

"Elongated exhales are an amazing way to activate your parasympathetic nervous system aka your 'rest and digest' state.

They're a simple but very effective tool you can use when you are feeling stressed/anxious to reset yourself, but are also great to do at the end of a workout to start the recovery process immediately

Nick Zervakis

Personal Workout Plan

by taking your body and nervous system down from its high energy state from the workout.

Cues:

Sit or lay down (If sitting find a tall spine or sit against a wall if it helps).

Close your eyes or take your gaze to a fixed spot e.g. the wall in front of you.

Focus on the sensations of breathing (eg air coming into your nose, descending down into your lungs and back out again).

For up to 10-30 rounds of breath, exhale for twice the length of your inhale.

For example you could:

- Inhale for a count of 2, exhale for a count of 4*
- Inhale for a count of 3, exhale for a count of 6*

The number is less important, it's more important that the exhale is more prolonged than the inhale.

This signals to your nervous system it is okay to relax :) "

Mobility: Upper Body Focus (Gym)

Treadmill Power Walk

1 sets x 10 min

*"*This exercise can also be substituted for any other form of moderate intensity cardio such as cycling, rowing or the cross trainer. I usually walk to the gym to do my workouts so treat that as my warmup.*"*

The purpose here is to raise your internal body temperature, elevate your heart rate and prepare to move in the workout.
